

FOR IMMEDIATE RELEASE

SKYSERVICE AIRLINES CUTS EMISSIONS WITH INTRODUCTION OF FIRST FUEL EFFICIENT BOEING B-757 IN CANADA.

TORONTO November 26th , 2007 -Skyservice Airlines is pleased to announce with the support of CIT Aerospace, the introduction into service of a Boeing B-757 aircraft equipped with Aviation Partners Boeing blended winglets.

This aircraft is more efficient than any other Boeing 757 operating in Canada. The B-757 recently returned from a state of the art modification where blended winglets were added to the outboard wingtips of the aircraft adding 10 feet of wingspan and dramatically reducing emissions while increasing fuel efficiency.

This B-757 equipped with winglets will save over 360,000 liters of fuel annually which translates into a reduction of 765 tonnes of CO2 emissions per year.

"These are remarkable numbers which demonstrates the Skyservice commitment to the environment and efficiency" said Rob Giguere, President and COO of Skyservice Airlines "It is clear from all of our stakeholders the installation of the blended winglets on our aircraft is a welcome addition to our fleet."

The high tech devices not only reduce emissions and fuel burn but also reduce the noise footprint of the aircraft while increasing its range. All of this translates into a signal from Skyservice Airlines to the world that **"OUR AIRCRAFT RESPECT THE PLANET."**

"The installation of these winglets show Skyservice's commitment to reduce fuel consumption and CO2 emissions in the environment," said Tony Diaz, Executive Vice President, CIT Aerospace "CIT is pleased to partner with Skyservice to provide them with financing solutions to help them achieve their operational objectives."

Captain John Hudson, Chief of Standard Boeing, who was instrumental in the decision to equip the 757 with winglets operated the first flight of the aircraft. "Not only did the aircraft perform flawlessly, the fuel burns and performance were right on the numbers." said Captain Hudson "It is also a very attractive addition to the airframe with the distinctive winglets emblazoned with the Skyservice livery and name."

Skyservice Airlines carries over one million passengers annually and currently operates a fleet of 21 aircraft including Airbus A-319's, A-320's, A-330's and Boeing B-757's to popular vacation destinations in Canada, the United States, the Caribbean, Mexico and Europe.
